

Q: Based on the molecular information, generate a natural language description to characterize the molecule's odor perception, including its dominant sensory impression and subtle secondary odor nuances, in a clear and vivid descriptive sentence.

Molecular: CC(O)C(=O)[O-].CC(O)C(=O)[O-].[Ca+2]

Odor Label: *odorless*

Ground-Truth: This molecule presents an essentially *odorless* profile, with only the faintest suggestion of clean, dry mineral softness if perceived at all. It remains neutral and unobtrusive from start to finish, leaving no noticeable aromatic trail or lingering character.

GPT 5.5

This molecule presents a very mild sour-dairy character, with soft lactic, creamy, and faintly mineral nuances that give it a clean, subdued fermented tone.

This molecule exhibits a subtle, mild lactic profile characterized by a clean, slightly tangy sourness that evokes the gentle essence of fermented dairy.

3.1-Flash

Claude
Opus

This molecule presents a mild, slightly sour and acidic character with faint milky-creamy undertones, carrying subtle buttery nuances reminiscent of fermented dairy products and a gentle, clean finish.

This molecule presents a sharp, sour acidity reminiscent of fresh yogurt or fermented dairy, underpinned by a clean, slightly chalky mineral nuance that softens the intense tartness.

Qwen 3.6

Deepseek
v4-Pro

This molecule carries a mild, slightly sour and creamy lactic scent, with a faint mineral undertone that rounds out its soft, dairy-like character.

This molecule presents a mildly sour, acidic character with a subtle dairy-like lactonic nuance, grounded by a faint, chalky mineral undertone that softens its overall sharpness into a smooth, balanced profile.

GLM 5.1

ChemDFM
v2_14B

The molecule is the calcium salt of lactic acid. It has a role as a food preservative, an antacid and a fertilizer. It contains a lactate.

This molecule presents an essentially *odorless* impression, with no clear opening note or aromatic lift. Its presence feels neutral and clean, leaving only a faintly dry, mineral-like stillness rather than a lingering perfumed trail.

Ours

Molecular: CCCCCCC(C)=NO

Odor Label: *clean; fresh; floral; green; earthy*

Ground-Truth: This molecule presents a *clean, fresh* opening with a crisp *green* brightness, like crushed stems and dewy leaves just after rain. As it develops, a soft *floral* nuance emerges over a subtly *earthy* undertone, leaving a natural, airy finish that feels both moist and gently mineral.

GPT 5.5

This molecule presents a fatty, *green* odor with a waxy, herbaceous character, supported by subtle *earthy* and mushroom-like nuances that give it a muted, natural depth.

Gemini
3.1-Flash

This molecule exhibits a sharp, penetrating chemical aroma characterized by *green*, herbal notes of freshly cut grass and stems, underscored by a faint, waxy fatty nuance.

Claude
Opus

This molecule exhibits a *green*, herbaceous character with distinct aldehydic and slightly fruity nuances, accompanied by *fresh* vegetable-like notes reminiscent of cucumber and melon, underscored by a subtle waxy, fatty undertone.

Qwen 3.6

This molecule presents a pungent, fatty odor with distinct *green* and herbaceous nuances, underpinned by a sharp, metallic note characteristic of aliphatic oximes.

Deepseek
v4-Pro

This molecule presents a *green*, waxy scent with a crisp, aldehydic lift, underscored by a subtle, creamy nuttiness that evokes freshly cut foliage.

GLM 5.1

This molecule presents a distinct *green*, leafy character, marked by a sharp, herbaceous note that forms the core of its profile, with a faint, underlying fatty nuance adding a subtle complexity to its vegetal tone.

ChemDFM
v2_14B

The molecule is a ketoxime derived from nonan-2-one. It is functionally related to a nonan-2-one.

Ours

This molecule presents a *fresh, green* opening with a crisp citrus lift, suggesting orange peel and crushed leaves. As it develops, a soft *floral* heart emerges with a waxy, slightly fatty warmth, giving the scent a smooth, rounded finish that lingers gently.
